

# CNX 20

WATERMANAGEMENT SYSTEM

**THE FUTURE OF  
SANITARY FACILITIES**

# Innovation in water management

## Over two decades of experience & trust

For more than two decades, CONTI+ has stood for pioneering innovations in digital fittings management. With the launch of the first CONBUS system in 1998, we ushered in a new era and have since successfully realized more than 1,400 projects.

This experience forms the foundation for the continuous development of forward-looking solutions that ensure not only the highest quality but also sustainability and reliability.

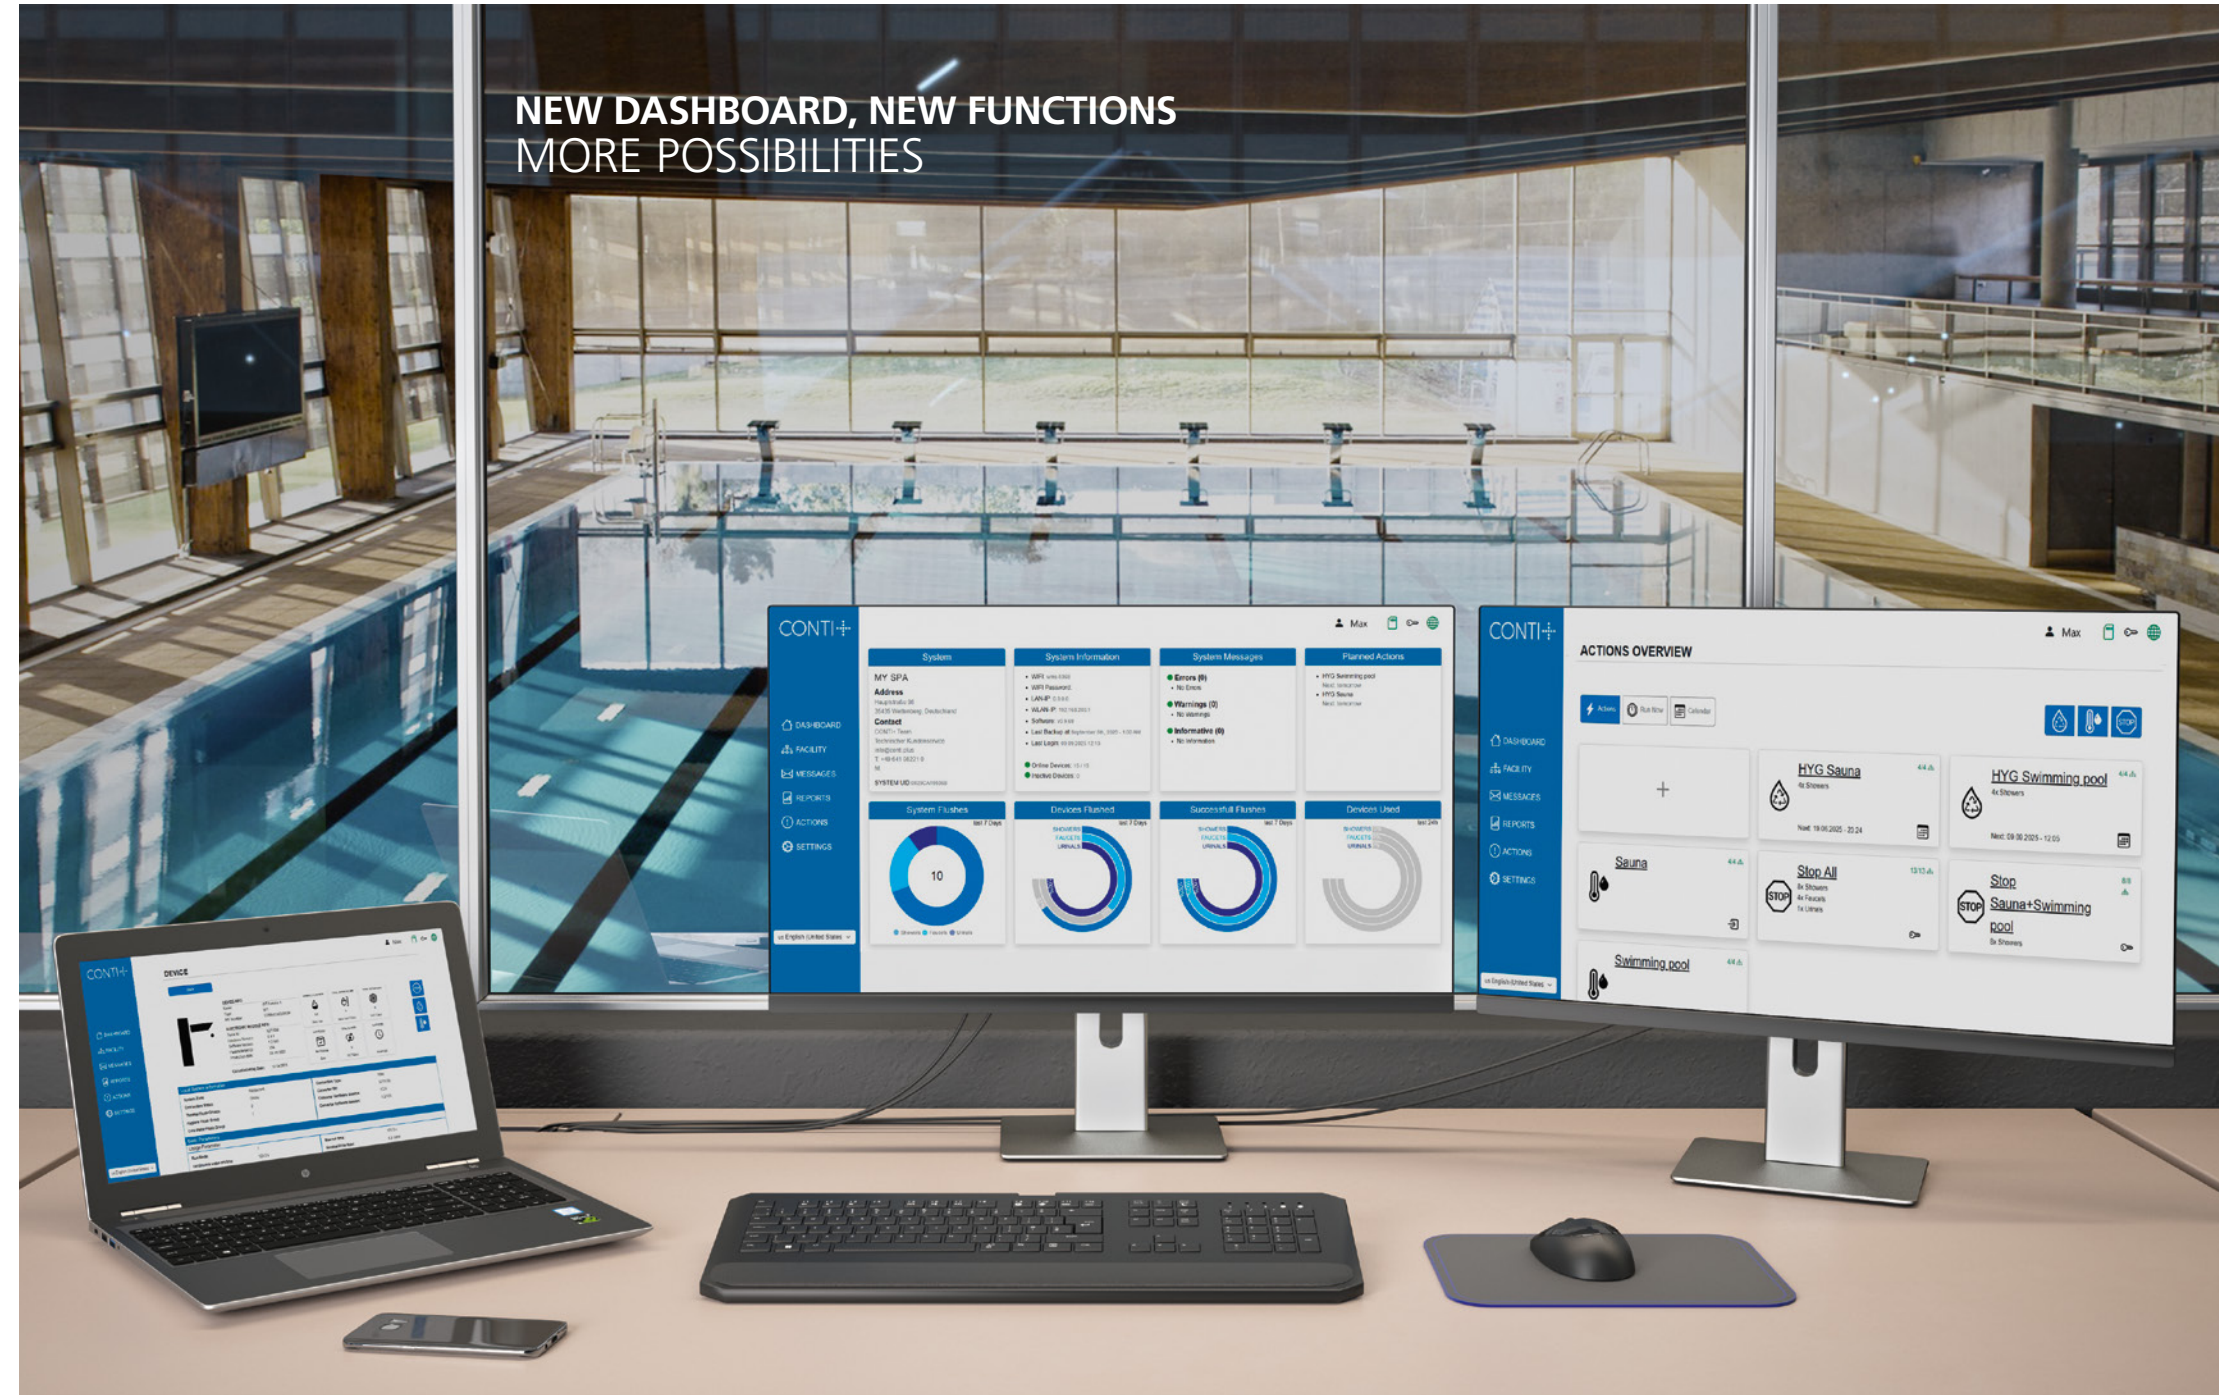

## With CNX 2.0, we are redefining water management.

It offers a wide range of intelligent functions, specifically designed to simplify your processes while using resources efficiently.

CNX 2.0 is more than just a system – it is a scalable platform suitable for both small installations and complex facilities.

Upgrading existing systems to CNX 2.0 can also be carried out with minimal effort.

**CNX 2.0**  
OUR SYSTEM – YOUR ADVANTAGES

CONTI+

## FULL CONTROL

Central management, operation, and programming of all CNX fittings

## UNLIMITED SCALABILITY

10, 50, or several hundred fittings – the CNX 2.0 water management system is a solution for every scale

## OPTIMAL OVERVIEW

Clear structuring of the system and simple grouping of fittings into action groups for individual hygiene measures

## INTUITIVE DASHBOARD

Immediate overview thanks to clear layout and color coding

## EFFICIENCY AT YOUR FINGERTIPS

All important functions accessible with a maximum of three clicks

## DETAILED INSIGHTS

Comprehensive fittings information and water consumption statistics

## FLEXIBLE MANAGEMENT

Flush schedules & actions can be controlled directly in the calendar or dashboard – anytime, even remotely

## SECURE DOCUMENTATION

All actions are automatically logged and stored in compliance with audit requirements

## FUTURE-PROOF

With regular updates and compatibility across generations we guarantee long-term investment security

www.conti.plus

### Centralized management – for all types of facilities

Whether large sports complexes, stadiums, swimming pools, thermal baths, schools, offices, or fitness centers – CNX 2.0 enables centralized management, either directly on site or remotely online.

## FITTINGS MANAGEMENT MONITORING & DOCUMENTATION

### Hygiene flushes – planning, review & documentation

All hygiene measures such as hygiene flushes, thermal disinfection, and now also cold-water flushes can be planned in advance or triggered directly on site for individual or groups of fittings. CNX 2.0 guarantees reliable execution with complete documentation – ensuring hygiene at the highest level.

### Stop function – staff safety

Temporary deactivation of individual or grouped faucets – e.g., during cleaning or downtime – with a user-defined duration. Optionally triggerable via key switch.

## SYSTEM STRUCTURE

### SYSTEM CONFIGURATION & CREATION OF ACTION GROUPS

### Flexibility & control – redefined

CNX 2.0 offers flexible options for individually managing all fittings. Zones and areas can be defined – from individual rooms to entire building complexes. The key advantage: despite individual configurations, faucets within the CNX system can still be controlled and programmed collectively.

In addition, key switches and dry contacts can be integrated. These then act as triggers for action groups – such as hygiene measures – which can be dynamically reassigned to groups at any time. In total, CNX 2.0 provides you with unparalleled control over the management of your installations.

## CONTROL UNIT THE HEART OF CNX

### Networking at the highest level

Seamless integration into existing building management systems (BMS) ensures perfect coordination between CNX 2.0 and the overall building infrastructure. Maximum efficiency – across the entire system!

### Simple & secure – efficient installations

Flexible installation: up to 64 devices can be connected per controller and distributed freely. Wiring is carried out with cost-effective standard cables. Multiple controllers can be linked in a master-slave configuration into a complete system, accessible via a central access point.

### Topology – simple networking

The system enables easy networking of fittings in line, star, or tree structures. The shielded BUS cables laid in cable ducts can be quickly and securely connected with waterproof single-wire connectors.

### Secure planning – through clear data

Detailed consumption and performance values, along with monitoring of the system status, allow targeted optimization and reliable planning. This supports compliance with hygiene regulations as well as sustainability goals, while helping reduce operating costs.

### CONTI+ product range – smart integration

The extensive CONTI+ product range can be easily integrated, managed, and documented – from shower systems to washbasin and urinal faucets, or kitchen faucets.

Further information  
At [www.conti.plus/CNX](http://www.conti.plus/CNX) you will find a clear overview of all CNX components and CNX-compatible products.

### Intuitive digital operation

User-friendly interface with clear structure and easy navigation.

## REMOTE SYSTEM ACCESS SECURITY EVEN WHEN YOU'RE ON THE MOVE

## Dependable & innovative

Hygienic, smart shower room and wash-room concepts to improve quality of life have been the hallmark of the CONTI+ brand for 50 years.

With our innovative technologies, broad product portfolio and comprehensive range of services, we offer optimum solutions to meet all our customers' needs for new build and refurbishment projects. Impressive, flexible all-round expertise.

From advanced electronic and mechanical shower systems, washbasin faucets and urinal controls through to washbasins, as well as complete washroom equipment and water management systems, we take an integrated approach to all products and system solutions, with a strong focus on sustainability, hygiene and reliability. As a result, the CONTI+ brand is respected among design engineers and architects as a professional partner.
